

# 3 Day Technical Training Course

# ClearSCADA

## Training program

Primary objective for this training course is to be technically proficient on ClearSCADA software so that you can train and support customers and system integrators that are using the product. This will have particular focus on differentiated features and customer benefits so that you understand the product positioning. The content of the course is compressed and therefore will run at an aggressive pace - so no snoozing!

During the course each participant will have a SCADAPack RTU configured for MODBUS and DNP3 for exercises. This will be used to demonstrate;

- Tight integration between RTU and SCADA software
- Event and exception data handling from RTU into SCADA historian

## Agenda

<b>Day 1</b> Start 9am	<ul style="list-style-type: none"><li>- Welcome / Introduction</li><li>- Installation</li><li>- Product Introduction</li><li>- A first exercise, Mimic Configuration</li><li>- Mimic Pick Actions</li><li>- Trending (Graphs)</li></ul>
